

TEKNO PARENTS

high quality premix

Correct nutrition is a prerequisite to utilize the high genetic performance potential of your birds.

To maximize welfare, reproductive potential (of both males and females), and chick quality by supplying a range of balanced diets that meet the requirements of parent stock at all stages of development and production. TEKNOYEM designed premixes for supplementation of parent feed with micro-nutrients like essential vitamins, trace elements and substances like antioxidants and organic acids for maximum hatching egg production and hatchability. By adding these micronutrients in suitable quantities, varying contents in the raw materials are compensated and the correct supply to the birds is safeguarded.

According to recommended breeds' feed schedule TEKNOYEM produced three types of premixes to cover all phases of rearing and production:

Starter premix: A feature of successful breeder performance is to achieve proper early growth and physiological development. In starter phase the birds should have the highest protein percentage in its entire lifetime, so that TEKNOYEM designed TEKNO PARENTS starter to give the proper amount of amino acids in addition to other essential nutrients to ensure the optimum development of the birds in this phase.

Grower premix: in this phase, daily growth rates and feed requirement is decreased but it is important to maintain good feed quality in this period, and to avoid the use of poor-quality feed ingredients, so that TEKNO PARENTS grower was designed to give the birds the optimum amount of nutrients (amino acids, minerals, trace minerals, vitamins and other enzymes and growth promoter) according to birds feed requirement.

Breeder premix: TEKNOYEM designed TEKNO PARENTS breeder to be used in breeder phases (contact us for more details how to move from grower premix to prebreeder until breeder premix). breeder phase requires higher amino acids and other nutrients for adequate development of reproductive tissue and for producing requirement, so it is important to provide well balanced diets powered by proper premix to provide the birds with the optimum amounts of vitamins, amino acids, minerals, trace minerals and other components.

Contact us for more details about male premix.

TEKNOPARENTS BREEDER

TEKNOPARENTS breeder is a blend contains high levels of nutrients to give the birds sufficient amounts of vitamins, amino acids, minerals, trace minerals, enzymes, and other promoters to ensure reaching the production target level and high-quality egg.

TEKNOPARENTS breeder designed to be used in breeder phases (by reaching 5% production), for more details you can contact us for best application of our products.

Ingredient Name	Each kg contains	Ingredient Name	Each kg contains
Vitamin A	520000 IU	Crude Protein	6.98 %
Vitamin D3	160000 IU	Dig-Lysine	0.948 %
Vitamin E	4600 IU	Methionine	7.72 %
Vitamin K3	241 mg	Dig-Methionine	7.91 %
Vitamin B1	203 mg	Meth + Cys	7.72 %
Vitamin B2	604 mg	Dig-Meth + Cys	8.38 %
Vitamin B6	201 mg	Threonine	3.27 %
Vitamin B12	2000 mcg	Dig-Threonine	3.88 %
Choline	18000 mg	Dig-Valine	0.955 %
Betaine HCL	20000 mg	Dig-Arginine	0.811 %
Biotin	13840 mcg	Dig-Isoleucine	0.842 %
Folic Acid	140 mg	Dig-Tryptophan	0.141 %
Pantothenic Acid	803 mg	Phosphor Total	8.78 %
Niacine	2001 mg	Phosphor AV	11.54 %
Iron	1608 mg	Calcium	11.07 %
Manganese	4800 mg	Sodium	6.4 %
Zinc	4809 mg	Chloride	6 %
Copper	640 mg	6-phytase	24000 FTU
Iodine	81.8 mg	M.E	2670 Kcal/kg
Selenium	12 mg		
Yeast Cell Wall	20000 mg		
Tributyrin	10000 mg		
Anti Caking	Included		
Anti Oxidant	Included		
Antitoxin	Included		

TEKNOYEM company is opened to be flexible and produce a special premix that suits your feed components beside giving the needed technical advice and help to make and modify your dietary components in order to reach the best possible performance.
